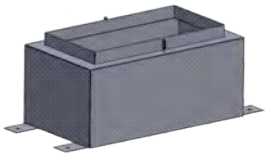
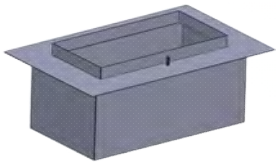
Gasboy recently introduced their Next-Gen Commercial Refueling Dispensers. This offering includes their 8800G Electronic Retail Hi Flow and 9100G Mechanical High Flow series. Diversified has developed Under Dispenser Containment for all of the offered configurations in Surface Mounted Above Grade UDC's, Flush Mounted UDC's and Below Grade UDC's. In addition to these basic configurations, DPM offers completely pre-manufactured units for both side outlet and end outlet applications. DPM's new pricing policies supports all customers from those that just want the sump to a host of options, all in a buffet style, allowing any configuration that the customer may need. Engineered drawings are available for all configurations. All Sumps are hydrostatically tested and all piping is pressure tested to 75 PSIG prior to leaving the factory.



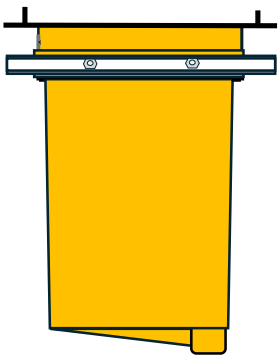
Surface Mounted

These UDC's are designed to match the outside profile of the AtlasX Dispensers. A unique 2" tall rain lip keeps water from entering the UDC. These dispensers are manufactured out of 12 Gauge 304 stainless or powder coated steel. Rails and stabilizer bars may be ordered in either stainless or powder coated options. Shear valve selection is available in double poppet units with powder coating or stainless options. All UDC's are available with a welded stud for a sensor mounting bracket for Veeder Root "208" sensors. Brackets are available for other sensor diameters. Units can be provided with the alarm sensor installed or the sensor may be provided and installed by the customer. These UDC's come with 4" by 3" feet for mounting to the surface. 5/8" diameter holes are included in the feet for customer provided anchoring systems. Fiberglass Penetration fittings are available in 1 1/2" FPT or 2" FPT for direct piping to the fitting. Internal piping to the share valve is all stainless. Standard units come with optional 3/4" (alarm) and 1" (power) rigid conduit couplings welded into the side of the UDC at locations specified by the customer.



Flush Mounted

Flush mounted UDC's are available with all the options offered for surface mounted UDC's except there are no mounting feet. Flush mounted units are provided with a 3" wide flange. Flush mounted UDC's are usually installed in docks where the flange supports the UDC. The UDC may be welded to other support members in the field.



Below Grade

Below grade UDC's are manufactured using virgin fiberglass and isophthalic resins. Frames are made from the same fiberglass materials or are available in 16 gauge 304 stainless steel. Frames are slotted on one end to allow electrical components to be installed through the frame of the dispenser. Stabilizer bars and shear valves are available in powder coated or stainless options. Shear valves are double poppet. These under dispenser sumps have a sloping floor and alarm cup at one end of the sump. Rails are extended on each end of the sump for welding to structural steel or for direct burial in concrete. An alarm sensor bracket is available with a slip in feature for the sensor. Sumps are available with the sensor installed. Sensors may be provided and installed by the customer.

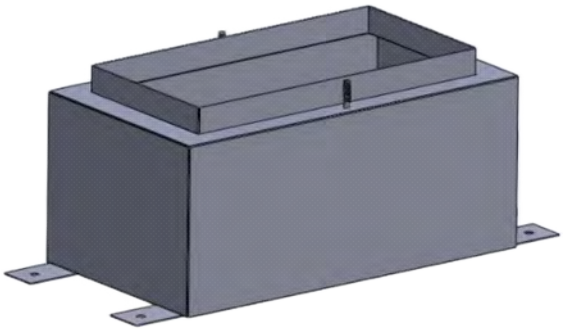
AtlasX Surface Mounted Under Dispenser Containment

Technical Data Sheet

Since the introduction of EPA driven regulatory activities in 1988, contractors have been buying components to comply with these regulations. Multiple manufacturers offered products and contractors had to sort out all dimensional issues, compatibility between manufacturers and had to have complex estimating procedures. Diversified has now solved these and other problems with the introduction of our Engineered UDC Systems for the Gasboy AtlasX series of Dispensers.



All components are either UL Listed or third party approved for their respective applications.

The AtlasX Surface Mounted UDC's feature 12 gauge Stainless or powder coated Steel. The UDC's are specifically designed for the AtlasX 8853G and 9153G series of Dispensers

These sumps are available in stand alone units for contractor fabrication or are available in a factory manufactured complete units.

All internal piping components may be removed and replaced using quick release sanitary fittings.

Availabe in side outlet or end outlet configurations.

Manufactured units are available with 1 1/2" powder coated or stainless shear valves or 2" stainless shear valves.

Manufactured sumps are available with stainless rails, stabilizer bar, piping and shear valve or in a powder coated option.

Factory piping is designed to mate to the dispenser piping eliminating the need for offsets.

Optional alarm sensor brackets are available installed in the UDC. The factory will install, as an option, the alarm sensor specified.

ROUNDTABLE
ENGINEERING SOLUTIONS

October 30, 2020

Mr. Josh Dow
Diversified Products Manufacturing Inc

Products Evaluated: Split Repair Fittings & Test Reducers for Containment Sumps for Fuels PF-Penetration Fittings Series, Sump Entry Fittings and Test Reducers
SR- Split Repair Sump Entry Fittings and Test Reducer Series
FG/PG Spilt Repair Series
CH- Series, All Chemicals used in the installation process
SU- Sumps and Accessories

Dear Mr. Dow,

In reference to the above listed products, our testing partner on this project (N.D. Eryou, PhD, PE) has performed our UL 2447 Third-Party inspection and testing. All products listed were determined to comply with the "Outline of Investigation for Fittings and Accessories for Fuels".

It is our opinion that both the design and materials used in the above products are based on sound engineering principles and the materials are compatible with all motor fuels and additives currently being used including fuels containing >10% ethanol or 20% biodiesel. Therefore, the Spill Containment Liner should have the same chemical resistance to the UL 2447 test fuels as the DPM "Products Evaluated" listed above.

Disclaimer: Underwriters Laboratories (UL) is an independent testing laboratory and use of, in any way, of the UL Listing or Registered Trade Mark UL is prohibited unless specifically authorized by Underwriters Laboratories.

Very truly yours,

Brian E Lewis, PE

It is our opinion that both the design and materials used in the above products are based on sound engineering principles and the materials are compatible with all motor fuels and additives currently being used including fuels containing >10% ethanol or 20% biodiesel. Therefore, the Spill Containment Liner should have the same chemical resistance to the UL 2447 test fuels as the DPM "Products Evaluated" listed above.

Further to your recent request with regard to your Canadian distributors utilization of the above test results, we have compared the testing requirements of UL (US) 2447 with CAN/ULC-S664:2017 and found them to be virtually identical.

There were only two differences that we found between the two Codes.

1. ULC S664 Section 5.8.5 "Extreme Low Temperature Impact Test – requires testing at -40^{0}F and our tests were conducted at a minimum temperature of -30^{0}F.

2. ULC S664 Section Appendix B 1.1 Defines 21 specific grades of fuel while UL US defines four grades of fuel, which covers the wide range of fuels commonly used by gasoline and diesel-powered vehicles.

Furthermore, we have reviewed the UL (US) website which contains the following relevant statement confirming the sharing of UL specifications between UL – US and UL - Canada:

"UL STANDARDS: ACCREDITED IN THE US AND CANADA

In the US, UL is accredited by the American National Standards Institute (ANSI) as an audited designator. In 2013, UL was accredited by the Standards Council of Canada (SCC) as a nationally recognized Standards Development Organization (SDO) able to develop National Standards of Canada (NSCs).

UL's Standards Technical Panels (STPs) serve as the consensus body for both American National Standards (ANS) and National Standards of Canada (NSC). Essential information About UL's standards development programs, how to **Access Standards**, and how to participate in the UL programs used to **Develop Standards** is available on this site."

It should not be inferred that our test of DPM products addresses the issue of long-term quality control issues as both UL (US) and UL Canada do with their annual subscription programs.

Disclaimer: Underwriters Laboratories (UL – US & UL - Canada) are independent testing laboratories and use of, in any way, of the UL Listing or Registered Trademark UL is prohibited unless specifically authorized by Underwriters Laboratories (US or Canada).

Very truly yours,

Warranty

Limited Warranty: Diversified Products Manufacturing Inc. (DPMI) warrants that the products sold under this agreement are free from defects in design, material or workmanship for a period of (3) years on all non chemical products from the date of shipment. DPMI MAKES NO OTHER WARRANTY WHATSOEVER, EXPRESSOR OR IMPLIED, WITH RESPECT TO THE GOODS OR WITH RESPECT TO THE MERCHANTABILITY OF THE GOODS OR THE FITNESS OF THE GOODS FOR ANY PURPOSE. DPMI's sole obligation with respect to any defect in any of the products will be, at DPMI's option, to repair or replace the item or to refund, in the form of a credit on account, the purchase price for that item. Where practical, parts must be returned to DPMI for evaluation. DPMI will not be liable for costs of labor or other costs with the replacement of the defective item. DPMI will not be responsible for any damage to the environment or any other damage associated with the use of the product. To the maximum extent permitted by law, Buyer waives any claim against DPMI by reason of any such defect or any breach of DPM's warranty herewith; and, without limiting the foregoing, any claim for indirect, incidental or consequential damages. Customer confirms that it has relied, is relying and will rely only on DPMI's warranty and understanding above, and that Buyer has not relied, is not relying and will not rely on any other statements, promise, affirmation, sample or model, any of which are superseded by this agreement. This warranty is conditional of Buyer promptly notifying DPMI of any alleged defect. Any product purchased by DPMI for use on or in conjunction with the Products which are manufactured by DPMI, DPMI extends to Buyer only the warranty that the product of vendor granted to DPMI.

Terms & Conditions of Sale

Payment: DPMI offers a 3% 10 day discount (less freight) from the date of invoice not the date of receipt of goods. Where a prompt payment discount is offered, funds must be received by DPMI by the 10th day following the date of invoice. Should diversified not receive payment in a timely fashion credit terms will be revoked. For payments received beyond 10 days where a discount is taken, Diversified will invoice for the discount taken. These invoices are due upon receipt. Typically all international orders are pre-pay before shipping. If any questions arise concerning accounts receivable Buyer shall contact the Credit Department for assistance. In the event of disputes Buyer shall pay the undisputed portion of the invoice within the above time.

Methods of Payment: Preferred methods of payment are by check by Phone, ACH or EFT. Credit cards while acceptable are not preferred as there is a 4%processing fee charged to the invoice. If Buyer chooses to wire funds, buyer is responsible for all bank charges both at Buyers end and DPMI's end. DPMI will invoice Buyer for all shortages on wire transfers. Such shortages must be made up within 30 days or with the next order.

Delivery: Sales are F.O.B. DPMI's factory. This means that the title to goods passes to the customer when the carrier leaves DPMI's facility. If shipping damage or loss should occur, buyer is responsible for filing the freight claim with the carrier. Buyer is responsible for noting any damage on the carrier's bill of lading. DPMI will assist in the filing of freight claims if requested to do so by the buyer. Buyer shall report any concealed damage or shortages in the Product to DPMI within (5) working days from the date of delivery.

Should a loss of product occur, after it has been shipped, Buyer is liable for payment of the original invoice as well as for invoices created for products shipped to replace lost or damaged goods. While Diversified may provide assistance to Buyer in filing a claim, financial recover of the loss is between the freight carrier and the Buyer.
